## REGION HISTORY

The farms located at South of Minas Gerais have the privilege of having an exceptionally favorable climate and ideal altitude conditions that allows the cultivation of a coffee with a very full body, excellent aroma and a unique sweetness grown nowhere else in the world but in the mountainous region of Minas Gerais.

○ Minas Gerais State  
● South of Minas Gerais Region

## PRODUCER HISTORY

It all started with his grandfather Alexandre Garcia Capelo, who was a small coffee producer. His son, Antonio Wander Rafael Garcia, is an agricultural engineer researcher in fertility area and coffee and nutrition, following in the footsteps of his father, he became a producer who dedicated his life to know and produce coffee.

Now, he is helped by his son André Luiz Alvarenga Garcia who is also an agricultural engineer, a researcher specialized in pruning and producing. Throughout this story with the coffee cultivation, many stories were lived and the family remained united in this activity that generated prosperity not only to them but also to all who have been connected, always seeking respect, humility and dignity.

The family is focused on improving the living conditions of all workers and their families. Over time, the green areas were expanded, with insulation and planting trees along the springs.

Changes such as the use of organic matter to the revitalization of the coffee plantations, reducing the use of agrochemicals and constant testing of new crops with resistance to rust, drought and nematodes are made.

## PRODUCTION CHARACTERISTICS

### Varieties

Yellow Catuaí, Yellow Catucaí  
Mundo Novo, Acaiaí, Acauã

### Location

Longitude: 44°29'26" W  
Latitude: 21°38' 05" S

### Temperature

Average temperature: 22° Celsius

### Flowering

September

### Process

Natural

### Harvest Time

Starts: July      Ends: September

### Altitude

860 up to 950 meters

### Area

Total: 75 hectares  
With coffee: 42 hectares

### Annual Production

1,200 bags
